NAFEMSWORLD CONGRESS

14-18 JUNE | SALZBURG | AUSTRIA

A WORLD OF ENGINEERING SIMULATION

THE FIRST HYBRID NAFEMS WORLD CONGRESS

On-site | Online | Get Involved

NWC21 will be a hybrid event and the first of its kind in the simulation community.

Based around the Congress Hub in Salzburg, Austria, one of the most technologically advanced conference centres in Europe, we will be able to combine the face-2-face event with virtual online components.

This includes live video streaming (in/out) of keynotes and sessions, online pre-recorded presentations, online communication and discussion facilities, live blogs, video live channels, and the integration of social media tools. Interaction and networking will be possible through video, audio and chat. The exhibition will be on-site in Salzburg and online around the world with interactive opportunities.

The Congress will be genuinely accessible to every single member of the analysis and simulation community.

We will cover every aspect of engineering modelling, analysis and simulation. That includes core topics like FEA, CFD, and MBD, as well as examining the next steps for our community and the technology. We will also be hosting the 5th International SPDM conference, as well as our International Multiphysics Simulation conference as part of the event.

This is not just another conference. This is where the simulation world comes together as one, in an independent, international forum to push engineering analysis forward. We want you to be a part of it.

We're going again in 2021.

This is your community,
this is your Congress.

On-site | Online | Get Involved

Call for Papers

No matter how the international landscape looks next year, we'll be making sure that you can participate in the Congress. Either on-site in Austria, or if you are presenting online.

Submit your abstract today, safe in the knowledge that you will have the option to present no matter what restrictions are in place either in your country or at the Congress venue.

If restrictions prevent you from getting to Austria, we'll make sure you can present your paper online.

The important thing is that you are part of it.

We're looking for abstracts covering every aspect on engineering modelling, analysis & simulation. If you think it's relevant, *it probably is*.

We have put together an extensive list of relevant topics, but even this is not exhaustive. Take a look at nafems.org/congress

Abstracts for both the 5th International SPDM Conference, and the International Multiphysics Simulation Conference, should be submitted using the same process.

Submit your 300-word abstract before December 31st 2020

This will be a journey for NAFEMS and our community. Come with us.

Sponsorship and exhibition packages are also now available.
Visit the website for full details.
